ANKIT PRATIHAST

Delhi, Mumbai | +91 9768445358 | ankitpratihast11@gmail.com | LinkedIn

Professional Summary

Senior Python Developer and AI/ML Engineer specializing in Generative AI systems, large language model (LLM) applications, and scalable backend architectures. Experienced in building production-grade ML pipelines, AI-powered automation systems, and enterprise APIs. Proven track record designing intelligent systems using Python, FastAPI, cloud platforms, and data engineering pipelines while leading technical teams to deliver end-to-end AI solutions.

Core Competencies

Languages: Python (Advanced), SQL, HTML/CSS/JavaScript

AI/GenAI: LLMs (GPT, Llama, Stable Diffusion), Langchain, Langflow, Ollama, n8n, RAG, Vector Database, Prompt Engineering.

Machine Learning: Scikit-Learn, Spark

Cloud: AWS, Azure (Databricks, function apps, web apps, AI Foundry)

DevOps: MLOps, AIOps, Unit Testing

Professional Experience

Senior Consultant (Data Science) — Aug 2021 – Present

Emergys Solutions Pvt. Ltd. (Pune, India)

GenAI & Automation:

- Smart Resume Parser: Developed and architected a GPT Based module that screens resume, extracts skills and ranks them according to the relevancy to the job description. This saved a lot of time and effort in screening resumes manually.
- Commodity Intelligence Agent: Built entirely on Langflow, this project gathered details regarding commodity, its price, the news and trade conditions and other suppliers from database all orchestrated by the orchestrator agent. This reduced the output time from days of research into minutes.
- P&ID Drawing reviewer: Built as an agent this project handled the end to end process of reviewing requirement data and vendor diagrams, flagged inconsistencies and return a file with errors/differences from the requirement sheet and the final diagram.
- SDIR (GenAI FOR Military): Lead a team in developing an image generation model on a complete air gapped environment with no api calls online. This model was designed specifically to run in a battle ready environment to adapt to all the changes that the adversary made to its arsenal and eventually use these results to detect the objects correctly.

ML and Analytics:

- Construction Cost Prediction: Built ML algorithms to predict commodity costs within hierarchical Work Breakdown Structures (WBS) for large-scale engineering projects. Replaced manual estimation with automated predictive pipelines, reducing estimation cycles.

- Marketing Mix Modeling (Promo): Developed 3 modules for profit calculation based on discount/promo with permutations and combinations for gaining maximum profits out of the promo provided per months, per season and per quarter.

Process Automation:

- Intelligent Platform Assistant (IPA): Contributed and developed a platform for clients on-site where we further built RPA bots according to their needs and deployed them on the IPA so everyone Globally can access those bots. Managed to save $3M yoy on average for 2 years which got us appreciation from global teams.

Data Analyst

Mar 2021 – Aug 2021

The learners camp. (Pune, India)

- Developed a website using react, html and css for students wanting to learn according to the job they want. Implemented TF-IDF based recommendation systems for courses and job recommendations withing the website.
- Built a Selenium web scraping pipelines for automated dataset collection from multiple different websites and open datasets.
- Led the development of data-driven web applications and analytics pipelines.

Data Analyst

Mar 2020 – Feb 2021

ThirdEye Inc. (Mumbai, India)

- Analyzed datasets using Python, SQL, and Excel to extract insights.
- Improved data extraction and reporting pipelines.
- Generated business intelligence insights from education and market datasets.

Personal Projects:

- AlgoTrading Bot: This bot takes in real time market data processes it in the backend runs it through different strategies and places orders to the market accordingly all happens seamlessly through python and al the charts get displayed on a frontend made with flask and tranding view library for plotting.

Education

Datta Meghe College of Engineering, University of Mumbai — June 2015- May 2019

Bachelor of Engineering – Electronics Engineering

Awards & Achievements

- **1st Place**: AGBA & Ministry of Information and Technology
  Awarded in Innovation in GenAI – Industry Vertical AI for our project SDIR for implementing next gen solution for tackling scarcity of data for military purposes.
- **Star Performer**: Emergys Solutions
  Awarded to the best performing contributor across product and engineering teams for working on Construction Cost Prediction and SDIR.
